

Appendix F. GraphAD+ visual proof for data-driven reranking

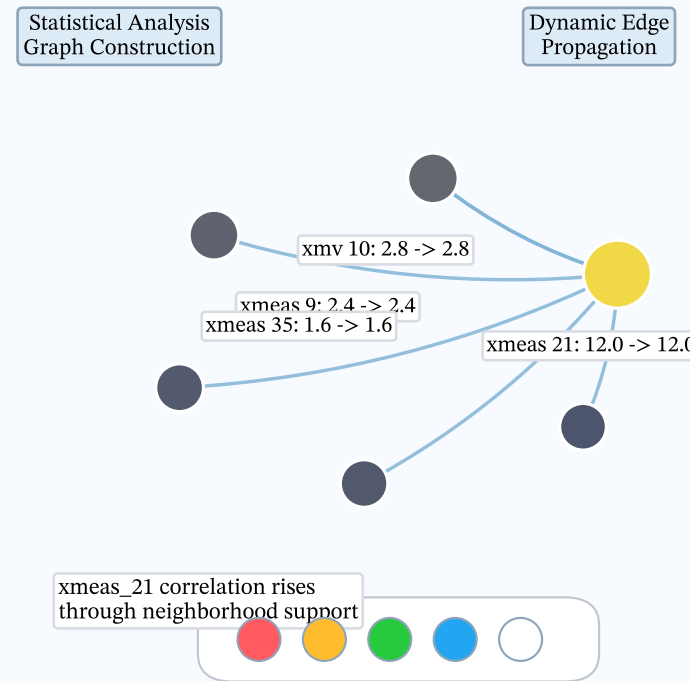

(a) Raw Anomaly Scores (t=200):
Data-driven Ambiguity

— Pearson correlation
— Correlation threshold > 0.7

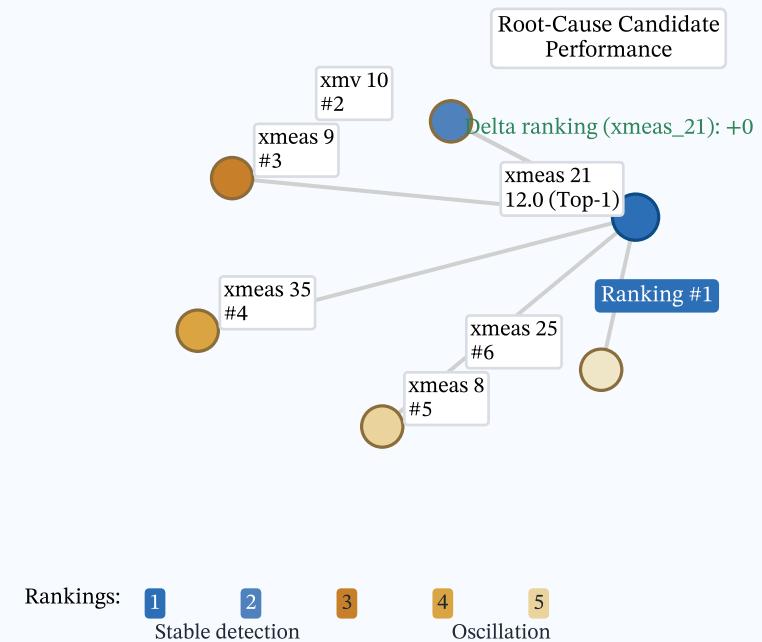

Raw anomaly evidence leaves several candidate sensors close together.

(b) Graph Smoothing (Eq. 8):
Correlation-based Propagation

Topology-aware propagation reinforces coherent sensor neighborhoods.

(c) Hybrid Reranking (p=1.8, b=0.2):
Root-Cause Identification

Rankings: 1 2 3 4 5
Stable detection Oscillation

The final reranking surfaces the most plausible root-cause candidate.
